Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-6 and 12, drawn to an apparatus for producing nonsymmetrical three dimensional food products, classified in class 425, subclass 376.1.
- II. Claims 7-11, drawn to a method of producing nonsymmetrical three dimensional food products, classified in class 426, subclass 512.

The inventions are distinct, each from the other because:

Inventions II and I are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the method of Group II as claimed can be practiced by another and materially different apparatus, e.g. an apparatus which does not include a gearbox having a plurality of gears, a motor connected to the gearbox to drive the gears in the gearbox, a vector drive controlling the motor which comprises an induction motor, an encodor providing signals to the vector drive, an iris diaphragm comprises a plurality of moveable blades arranged in a shutter like configuration, a blade drive ring connected to the blades, a drive lever having one end connected to the drive ring and the other end connected to the gear box, a flip cutter mounted adjacent the iris opening, a servo device controlling the motor which comprises a synchronous motor.

Art Unit: 1761

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art requiring separate searches as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicants are advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
